

BIVALVE NASAL SPLINT

DESCRIPTION:

The **Bivalve Nasal Splint** is designed to provide septal support and reduce or prevent adhesions between the septum and lateral nasal wall following surgery. The splint is available in four models: standard or large, .25mm or .5mm thick. All models feature a lengthwise slit to facilitate insertion and removal, and preformed suture holes for stabilization. Made of clear medical grade fluoroplastic that is flexible and non-adherent.

INDICATIONS FOR USE:

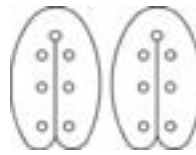

To provide septal support and reduce or prevent adhesions between the septum and lateral nasal wall following surgery.

SUPPLIED:

Sterile, 10 splints per dispenser carton (1 pair per pouch)
